

Ziyue Fang

(615) 484-2527 | ziyue.fang@columbia.edu | ziyuefang.dev | linkedin.com/in/ziyue-fang-280a33314

EDUCATION

Columbia University

B.S. in Computer Science, GPA: 3.6/4.0

New York City, NY

Expected May 2028

- **Relevant Courses:** Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Object-Oriented Programming, Advanced Programming, Discrete Mathematics, Linear Algebra

EXPERIENCE

Claim | Product Engineer Intern

Finds class-action settlements for users to claim money

New York City, NY

Mar. 2026 – Present

- Built and ran a 3-funnel $\times$ 13-variant pricing experiment ($\sim$ 650K visitors) on a Firebase + React (TypeScript) app, surfacing a funnel with 19% higher revenue per visitor and a pairing 40% above average.
- Built an internal analytics dashboard mirroring Stripe and Firebase data, using SQL to query pricing and auth experiments and compare arms to maximize revenue.
- Designed a Gmail API scanning pipeline matching users with qualifying products, balancing accuracy, speed, and cost with parallel scanning that reads a 3-year inbox in under 10 seconds and LLM verification at $\sim$ \$0.01 a scan; rolled out to 10K users behind feature flags, lifting monthly retention by 4%.
- Spearheaded partner integrations (play games for money, subscription cancellation, bill negotiation), owning features end to end from evaluating partner APIs to wiring integrations and webhooks, working cross-functionally with designers and PMs to increase customer LTV.
- Added unit tests for backend operations and frontend components, resulting in a 21% increase across code coverage.

Zoomob Limited | Software Engineer Intern

Game studio building interactive visual novel games

Hong Kong, China

May 2025 – July 2025

- Developed a full-stack AI web app (TypeScript, Next.js, Supabase, TailwindCSS) for building story worlds, shipping the world-building UI, generation flow, and 30+ components end to end, helping writers create storylines faster.
- Created 12 schemas in PostgreSQL, and implemented 24 corresponding REST API endpoints for efficient CRUD operations.
- Integrated 5+ third-party API services (Google OAuth, Stripe Checkout, OpenRouter) and ran subscriptions over webhooks, from login through payment to AI generation.

PROJECTS

CollegePilot | TypeScript, React, Supabase Edge Functions, Postgres/pgvector, RAG, LLMs

- Built and independently scaled CollegePilot, an AI college-counseling app, to 5K+ weekly active users.
- Built a RAG layer retrieving only relevant parts of a student's essays, activities, and colleges database (Postgres/pgvector, 384-dim embeddings, cosine similarity) instead of pasting everything into the prompt, for sharper feedback at lower token cost.
- Ran A/B tests on UI/UX, onboarding, and funnels to improve activation and retention.

StonksGPT | Node.js, Express.js, React, TypeScript, MCP, LLMs, Docker

github.com/Tobbs2005/StonksGPT

- Built an LLM trading agent on the Alpaca API that turns plain-English requests into research, portfolio management, or trades through an MCP tool-calling loop, with the Node backend and Python MCP server containerized in Docker.
- Cut token costs by roughly 90% by implementing a sliding context window and LLM summarization layer, compressing each MCP tool result to just the fields the model needed.

MovieMatch | Python, FastAPI, Next.js, TypeScript, SBERT, Hugging Face

movie-match-ten-zeta.vercel.app | github.com/Tobbs2005/MovieMatch

- Developed a Tinder-style movie recommender over 15K movies, ranking by cosine-similarity KNN on Hugging Face SBERT embeddings against the average of a user's likes, with a per-genre cap for variety.
- Served results from a FastAPI REST backend to a React (Next.js, TypeScript) frontend with client-side state caching.

TECHNICAL SKILLS

Skills: Python, Java, C, C++, C#, JavaScript, TypeScript, React, React Native, Node.js, Express, Flask, Next.js, HTML/CSS, PostgreSQL, Redis, AWS (S3), GCP (Firebase), Docker, Git, Unix, Linux, LLMs, prompt engineering, RAG, MCP, A2A
